Fire and a portion on the east designed to support the walls is in a state of ruin. One of the sections on the roof was blown over the door displaced, leaving full access to the rain. Doors were breaking, mantle fallen down floors covered with broken plaster.

One floor badly cut with an area all, except the outer walls, presenting a most disgusting aspect of neglect and ruin. In addition to this, the committee observed that in many of the places the iron supporting the arch had been removed and carried away for other use, thus taking away the main support at the base of considerable damage. The flooring estimate for damage is $50.

The "New East" building, which is more recent on the place, has a size of 30 x 16 feet, and is four stories in height. It has 22 dormitories 16 x 18 feet, 4 reception rooms, 16 x 22, and the Debating hall and Study of the Philo Society Society, each of which has an area of 36 x 24. The committee have above deplored, to some extent, the condition of a part of this structure.

It is apparently, the most ill constructed of all the buildings. Too much, any inferior material was used which has resulted in some places near the basement, where the water was thrown against the wall in the part that is in the falling of the stones, since the washing out of the wood shed. The wood, to be burned, as elsewhere, was used, and the same was the case with some of the roofs. One section was chewed through which the rain had damaged the building. This was the New East were treated with pipes.

The heating apparatus is both in the best condition and well and repaired before they are certain in the winter months. The heating continued in both rooms well this week.

The "Ball Room" in Smith Hall is used by the Board of Trustees, located about 100 feet south of the Old East, and with the basement, two stories high, has a length of 128 feet and a width of 36 feet. The walls of this building are in excellent condition, and being deceased, the keys to the College Library, which is supposed to occupy the second floor, the committee had no means of maintaining the condition of the roofs or the state of preservation of the books.

Some steps in this basement had been broken through one of which was used in some chemical instruments. In the basement there were several rooms, some limited in the purposes for which and the property of the storage place for its use turn out, were all left to conjecture.

From their observations, the committee were clearly of the opinion that the special attention of this building was due to its
